

"Get Out, Damn Poop!"

Poop Easily Every Day And Eliminate Belly Bloat Without Probiotics, Fiber Or Laxatives...

Find out how 19,583 formerly-constipated Americans are now enjoying perfect poops without pain, strain, or dangerous enemas!

Leading New York City gut doctor Dr. Gina Sam M.D. has discovered a new way to clear bloating, ease constipation and increase gut motility to restore perfect daily poops.

It involves eliminating digestion-slowing 'bacterial overgrowth' that can take over the digestive tract.

Keep reading to discover a new 7-second poop releasing ritual that can eliminate up to 10 pounds of constipation and help flatten a bloated belly.

Gently yet fully eliminate bowels each morning without pain or strain

Poop out up to 10-15 pounds of bloat in the first month

Stay lean and trim by reducing gut inflammation and stuck poop

Help eliminate painful heartburn and indigestion that comes from spicy foods

Enjoy favorite foods without bloating and unexplained weight gain

Meet Dr. Gina Sam A World Renowned Expert On Digestion and Gut Movement

Gina Sam, MD, MPH, is a gastroenterologist who diagnoses and treats patients at The Institute of Gastrointestinal Motility Disorders and Integrative Health in New York City, New York. She is the founder of the practice, which she dedicates to GI motility disorders and sluggish digestion.

"My name is Dr. Gina Sam. I'm a board certified gastroenterologist, and professor of Medicine based in New York City.

I served as the director of the Mount Sinai Gastrointestinal Motility Center for several years, and I also served at Weill Medical College of Cornell University, the biomedical research unit and medical school of Cornell University.

And I'm the founder and director of The Institute of Gastrointestinal Motility Disorders and Integrative Health in New York City.

Many doctors consider me the world's foremost authority on 'gut motility'.

If you've never heard that term, gut motility is just a fancy way of saying 'digestion speed' or 'pooping speed'.

In other words, Gut Motility measures how fast food makes its transit through the gut and becomes poop.

If gut motility is too fast, the gut won't extract the proper nutrition out of food, and one ends up with diarrhea.

Too slow and folks end up with dry hard feces, or worse constipated, suffering from unsightly belly bulge and unexplained weight gain, and find themselves squeezing and straining on the toilet."

Why Most Digestion 'Remedies' Do More Harm Than Good...

These are things I see almost on a daily basis in my NYC office, and I know very well the problems that happen when you use these kinds of

Why then the problems that happen when you use these kinds of temporary solutions.

Sure, some of these could provide some relief momentarily...

But because the root cause isn't addressed, the symptoms come back in a couple days, and each time in the cycle, the gut becomes more and more degraded, suffering from constipation, bloating, embarrassing gas, and *spending hours on the toilet squeezing and straining.*

FIBER

Helps Bulk Poop, but Also Feeds Bad Bacteria and Causes Bloating.

Fiber has been a digestive remedy as far back as I remember. I actually remember being a little girl and seeing the big orange cans of fiber on my uncles counter.

Because fiber will bulk poop, and expands inside the intestines, it can sometimes push things through temporarily, and gives some people the 'impression' that it's actually helping with constipation.

However, because most people with these kinds of symptoms have too much bacteria.

☞ **The problem is, fiber FEEDS bad bacteria and parasites.**

This creates gas, and uncomfortable, painful bloating. If you've tried certain fiber supplements, you might know exactly what I'm talking about.

Not to mention most commercial fiber products are loaded with artificial sweeteners and flavors to mask the horrible taste, and just aren't very effective.

And especially if someone's looking to get their digestion back on track - commercial fiber supplements are doing more harm than good.

I'll show you a more natural way - a way that will reduce bloating, and gently speed up pooping speed, and help stools pass every day - with ease.

LAXATIVES:

Dangerous Chemicals That Destroy the Colon With Use

A laxative is a chemical, usually polyethylene glycol, or that forces the body into pushing out the contents of the colon.

So yes laxatives can work temporarily. However you should never use laxatives, and here's why:

☞ **Laxatives will actually destroy parts of the colon.**

In one study, the mucosal lining was negatively impacted to the point where the natural folds inside of the intestine had turned completely smooth [3].

Once the colon loses its shape, form, and elasticity, it's no longer as effective in terms of waste removal. As a result, people might start to rely on laxatives. And once they start relying on them, it becomes increasingly difficult to stop.

☞ **It's a dangerous cycle that leads to habitual use, and worsening digestion with each use.**

And not only that, using laxatives over time will eradicate most of the body's healthy good bacteria.

There's a simple way to restore and strengthen the body's good bacteria, while deep cleaning the small intestine eliminating bacteria colonies and parasites.

x PROBIOTICS Should Never Be Taken Orally (Here's Why)

Ok so all these things don't work because they get destroyed by the natural gut microbiome, and kill most of the body's good bacteria...

Now you might be asking... but what about probiotics?

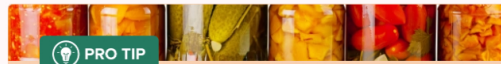

Probiotics have literally exploded in popularity over the past 4 years.

So why has bloating and constipation increased sharply over that same time period?

Now don't get me wrong. Probiotics are amazing, when they are in the right place.

But here's the problem with this... How do you not only bypass the destructive acid in the stomach, get them to the large intestine?

Not to mention that the small intestine should be kept clean and free from bacteria at all times.

Fermented Vegetables and probiotics naturally occurring in food (not supplements) have the highest chance of being delivered fully into the large intestine

It's not possible with oral probiotics. Most get burned up in the stomach acid, while the ones that DO survive only make it to the small intestine — *Which is NOT where they're supposed to be.*

Chances are the small intestine does not need more bacteria. In fact, the small intestine needs much less bacteria - it should be perfectly clean.

In other words, probiotics when taken orally, are counter productive.

In fact, a recent study showed that oral probiotics actually slowed down the rebuilding of a normal gut microbiome.

The clinical trial published in the Cell Journal, showed that 'probiotic use led to delays in the normal healthy bacteria re-establishing themselves.'

Senior researcher Eran Elinav, MD, PhD concluded "Contrary to the current dogma that probiotics are harmless and benefit everyone, these results reveal a new potential adverse side effect of *probiotic use that might even bring long-term consequences.*"

The Surprising "Root Cause" Of Bloating, Gas and Constipation

So before we talk about how methane affects the gut, here's a quick lesson on how food and waste product moves through the digestive tract...

Food moves through the gut using a process called peristalsis. Peristalsis is the involuntary constriction and relaxation of the muscles of the intestine, creating wave like movements that push the contents along the intestine.

You see, there are nerve endings throughout the walls of the intestines... And these nerve endings sense where the food is, and act accordingly, pushing it through the digestive tract.

There's also the Migrating Motor Complex (MMC), which are the 'waves' that clean and flush out the digestive system. These cleaning 'waves' should be happening around once every 4 hours.

When there's constipation and bloating, it means that these waves have slowed dramatically. For many years, this slowdown was a mystery even to the top gut doctors.

Recently, a study from The Temple University School of Medicine in Philadelphia shows that peristalsis waves are drastically slowed by the presence of methane gas

And once this happens, the blockage gets backed up even further and now extends into the small intestine, eventually reaching the stomach, causing nausea, ulcers, and heartburn.

In turn, this creates even more bacteria overgrowth, and even more production of methane gas. And besides smelling terrible, this gas can cause one's belly to protrude and water retention like you

makes everyday living very uncomfortable.

Folks end up constipated, squeezing and straining, maybe even having feelings of nausea, just feeling fatigued and unwell.

Right now, one might be thinking, where does the methane gas come from in the first place. And that's a very good question...

"It **Slows** Digestion To A Grinding Halt. And Here's Where It Comes From...

You see, it's well known that digestion-slowing methane gas is actually the byproduct of microscopic invaders, called Archaea.

Archaea are ancient, single-celled organisms that can live in extreme environments like salt lakes or hot springs and also inside animal and human guts.

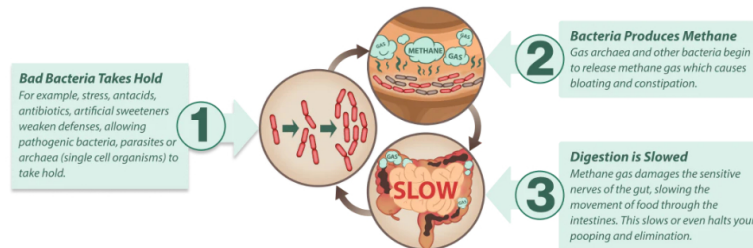

It's an infestation - a rogue colony of methane-producing bacteria that have made themselves at home in the small intestine — a place that needs to be relatively clean.

Methane gas — waste product from these organisms — transforms the gut into an environment that suits their offspring and colonies.

These nasty parasitic invaders slow down pooping speed in order to increase their feeding time, and also prevents their victims from expelling them into the toilet.

They are creating an environment where their colonies are more safe and comfortable, and meanwhile, their human host becomes constipated, backed up, and feeling miserable.

They can affect the brain, causing cravings and generally hijack the gut for their own purposes — at the expense of one's health.

A Clogged Colon Can Lead to SIBO, Parasites, Leaky Gut And Unexplained Weight Gain

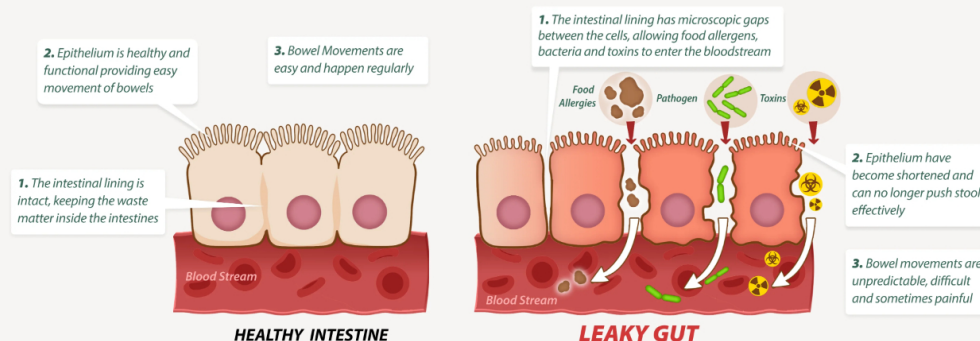

Once the gut loses the ability to keep pushing its contents through, it results in a toxic buildup of sludge, bacterial colonies, and parasites.

Bacterial overgrowth is rarely detected by doctors. Sadly, it's a silent thief of energy, vitality and health.

Their goal is to grow the colony, so they send signals to the brain to overeat. Because let's face it... When folks overeat, it helps their colonies grow even faster.

All of these organisms have their own waste products. And those waste products go straight back into the bloodstream **making one feel sick, tired and vulnerable to excessive weight gain.**

👉 **Ultimately, these organisms and their byproduct, methane gas will slow down digestion, creating constipation and build up of fecal matter in the colon.**

Methane in particular will slow down your digestion, creating constipation and build up of fecal matter in the colon.

01

Brush Border Damage

First, the bacteria produce toxic byproducts that damage the brush border of the small intestines. The brush border is the absorptive surface of the intestinal cells and when it is healthy it produces enzymes that breakdown food. Once this process is damaged, digestion is slowed even more.

02

Cell Lining Damage

Hidden colonies of bacteria may also damage the cell lining the small intestine (the mucosa), causing significant interferences with the digestion of food and absorption of nutrients; this may result in leaky gut, food intolerances, as well as vitamin and mineral deficiencies. And these deficiencies cause cravings that can't be satisfied, no matter how much you eat.

03

Hiding Organisms

Some of the organisms like to burrow themselves into the intestine so they can hide. This creates little tears in the intestine which allows their toxic byproducts as well as undigested pieces of food, and microscopic pieces of poop to leak into the bloodstream, where it causes headaches, fatigue, and joint pain.

The KEY Is To Stop The Production of Methane Gas At The Source...

What if there was something folks could do at home, using safe and natural ingredients to clear out every foreign invader that slowed digestion?

It could literally mean relief for hundreds of thousands of people around the world who couldn't make it to my New York City practice.

No more worrying about digestive issues when going out with friends. No more worrying about how certain foods will affect digestion...

👉 No more unwanted, unexplained weight gain or worrying what to wear or how to hide a bloated belly.

So I began researching every natural ingredient and at-home methods I could find that could gently eliminate the overgrowth of archaea, and naturally restore balance to the gut microbiome. There are tens of thousands of ingredients out there, and most of them have little to no clinical studies.

It wasn't until I started looking at rare, exotic ingredients used in Southeast Asia that I found what I was looking for.

Introducing emma

A Power Wash For The Insides, Formulated With The Help Of Renowned NYC Gut Doctor Gina Sam M.D.

The first and only Doctor Endorsed Formula that targets bacterial overgrowth, parasites and pathogens of the small intestine and strengthens the microbiome at the same time.

The breakthrough is the selectivity, and the ability to destroy bacteria in the small intestine, while strengthening the delicate microbiome of the large intestine.

It's like a power wash for the insides.

Imagine finally waking up in the morning and completely emptying the bowels so the stomach feels flat and sexy...

To shed several pounds of "stuck poop" and watch in disbelief as the belly shrinks...

And finally feel LIGHT and ENERGETIC as excess poop is removed...

Gone are the days of straining, and squeezing. Not knowing when a successful trip to the bathroom will finally happen.

[Claim Your Supply Of Emma Today >](#)

This isn't a dangerous flush or laxative. That's hard on the system and over time they smooth out the delicate folds of tissue that are used to push things through.

Emma uses **cellular signaling** — the same language the good guys in the gut use to talk to each other. In this way, Emma has a remarkable ability to target the pathogenic bacteria, know who's good, who's bad and has got to go!

3 Ways Emma Helps People Achieve "Perfect Poops"

Emma is a science-backed breakthrough that flushes out pathogenic and disease causing bacteria, parasites and toxins, eliminating bloating, embarrassing gas, while also strengthening the gut microbiome.

Now, say goodbye to spending hours on the toilet with painful straining, excessive wiping, chafing and painful hemorrhoids. **Emma has helped thousands of people finally flatten their waistline by "flushing out the bloat" and eliminating 10 or more pounds of toxic poop that might be fermenting inside the belly.**

Emma works in **three different ways** to **normalize bathroom habits, usually within a few weeks of taking it to eliminate constipation and bring back those perfect poops, daily.**

It increases motility, aka pooping speed, so toxic waste isn't stuck fermenting inside the gut, restoring peristalsis waves that regularly clean out the intestines.

It clears out bacteria and parasites that have formed colonies deep inside the folds of the intestines, while supporting the healthy gut microbiome, reducing embarrassing gas, painful bloating and cleaning out other toxic byproducts of these rogue invaders.

It calms the nerves and relaxes the tight intestinal muscles so stools can effortlessly glide out of the colon, **giving the feeling of complete release and elimination, daily.**

"I struggled with constipation and uncomfortable bloating, and fatigue for 20 years. I went to every doctor in my city and tried everything, including laxatives, cleanses, and probiotics.

The cleanses and laxatives gave me relief temporarily... but over time I felt like needed them more and more. And probiotics made my bloating and gassiness even worse.

Emma has been a godsend. **It's only been 2 weeks and I'm already pooping like I did as a teenager.** Thanks to Emma, for giving me my life back. I can now eat what I want and I'm back in full control of my digestion!"

Catherine K.
verified customer ✓

The days around my period is probably the worst days of digestion for me. No matter what I eat, I feel bloated and get cramps in my lower stomach. It's like carrying an extra 10-15 lbs down there. **My energy is sluggish and I just don't feel like myself.**

After trying Emma for a month, all of my tummy problems were gone and I barely notice the difference when I'm on my period and when I'm not. My energy level is also a lot higher and my mood is better. **I feel like Emma does way more for my health than fixing my gut issues.** I don't think I'll ever stop taking it. With Emma for life!

Emma's Clinical Supported Ingredients Promote Total Gut Cleansing And Detoxification

Berberine: The Southeast Asian Diastive

Superpower

Berberine is an amazing plant extract that has been used in Eastern medicine since around 650 B.C. For over three thousand years, Berberine was highly regarded for its healing properties and used in ancient and traditional medicine in both Asia and Egypt.

This ingredient has been studied by scientists and health experts across the world, yet in the modern western world, it's been kept hidden from us.

Berberine acts like an army of friendly soldiers that march straight to the gut and get to work destroying the nasty gut invaders that may have hijacked the body.

Not only will it help kill off the nasty archaea who have taken over the gut, it can also help fully empty the bowels every day to feel light and energetic again...

Say goodbye to uncomfortable gas, painful straining, and excessive wiping...

Also say goodbye to that "bloated belly look" and hello to a slim and trim midsection that feels confident and sexy...

And unlike antibiotics, which are massively overprescribed by doctors and almost always do more harm than good...

Berberine kills the methane-producing archaea without harming any of the friendly microbiome in the gut.

Studies have actually shown that it boosts and strengthens the friendly flora.

In fact, in a 2014 study conducted at The Johns Hopkins Department of Internal Medicine, found **Berberine was shown to be as effective as Rifaximin (a strong antibiotic) in reducing bacterial overgrowth as well as eliminating archaea, but WITHOUT the side effects.**

In an 2018 animal study, berberine was shown to not only destroy archaea and other harmful bacteria living inside the gut microbiome but also was shown to boost healthy friendly flora that have their own incredible health-promoting effects.

Berberine has many other healing qualities which include lowering blood sugar, lowering cholesterol, and it's also great for weight loss because it activates the AMPk pathway — the metabolic master switch.

The more I discovered about Berberine, the more I knew it would be a total game-changer for my patients.

But remember - berberine alone is extremely hard to absorb and not very bioavailable.

Which is why I started to experiment with a few other gut-healing ingredients that can be combined to increase bioavailability and help deliver faster, more permanent results.

Deglycyrrhized Licorice (DGL): Digestive Lubricant That Helps Perfect Poops Slide Out With Ease

Used as a digestive aid for thousands of years, DGL has been shown to heal the digestive tract by increasing the body's mucus-producing cells in the gastrointestinal lining.

This mucus serves two very important functions in the stomach...

First, it provides a protective coated layer that cushions and protects cells from external toxins and even the body's own digestive acids and enzymes.

And second, it creates a wet, slippery substance that helps movements pass through easily, helping to promote **magical daily poops that practically slide out on their own without pushing or strain.**

Like a well lubricated slide, DGL helps poop effortlessly glide through intestines while unclogging the colon and eliminating the build-up of "stuck

poop" that causes excessive fecal weight issues.

DGL is the KEY to those perfect poops that slide out clean and require minimal wiping.

It's also been used traditionally by women to help balance hormones during menstruation and menopause.

Star Anise: A 3000 Year-Old Ancient Secret That Optimizes Bile Production

Next, I included a 3000-year-old Asian secret called Star Anise...

Star Anise helps stimulate the digestive tract and release the body's natural laxative, bile.

Many people with constipation have low bile and don't even realize it.

Bile acids are created in the liver and released into the digestive system to help break down fats so they can be absorbed into the body through the small intestine.

Bile acid also softens stools, providing even more lubrication for poop to quickly move through the colon.

Quercetin: Master Antioxidant That Helps Repair Intestinal Damage And Reduces Allergies

I also included one of my all time favorite ingredients, the plant based polyphenol, Quercetin.

Quercetin is an antioxidant, anti-inflammatory and has been shown to help the body fight off many harmful diseases.

Some studies even suggest that in certain conditions, it has the potential to help kill off cancer cells, control blood sugar, and also prevent heart disease.

And while that's wonderful, the main reason I included Quercetin is because it also helps **fix and repair the damage that Archaea and other parasites may have caused to intestinal walls...**

Remember, we talked about how leaky gut is caused by holes in the gut lining that allow tiny particles of poop to leak into the bloodstream, causing headaches, joint pain and fatigue?

Quercetin acts like a repairman and helps cells patch up the holes and supports the mucosal lining of the gut, which is the protective barrier separating the gut from the bloodstream.

Resveratrol: A Powerful Fat Burner That Will Also 'Remodel The Gut'

Now, remember we talked about Berberine and all of its incredible benefits for flushing the bowels and repairing the gut lining, but it's just not very bio available?

Well, our final ingredient, Resveratrol, is THE KEY to boosting bioavailability and unlocking all of its full power, as well as bringing its own powerful set of benefits.

For example, resveratrol is one of the compounds responsible for the "French Paradox".

At a time when dietary saturated fats were believed to contribute to heart disease, researchers were shocked to find that France, with its high intake of fatty foods, had less heart attack deaths than those in the US and the UK.

Laboratory studies show that **resveratrol can block the formation of new fat cells, reduce the accumulation of fat tissue and enhance fat burning efficiency.** Resveratrol activates genes to stimulate fat burning and increase metabolic heat – also known as thermogenesis, unlocking the body's full fat burning ability.

However the most overlooked benefit is that Resveratrol is known to 'remodel the gut'.

For example, studies demonstrate that it increases levels of friendly flora lactobacillus and bifidobacterium, while reducing Enterococcus faecalis, a nasty bacteria associated with chronic infections, cancer and obesity.

Remember we talked about how bile is the body's natural laxative? Well, resveratrol also increases the body's bile production, to ensure bowel movements are easy, regular and well lubricated.

And to top it off, several studies have shown that resveratrol can improve the integrity of proteins in the cells of the gut barrier. Resveratrol activates the genes involved in maintaining these tight junctions between the intestinal cells, helping the body to **reverse a leaky gut condition.**

What's meant to be in the gut, stays in the gut.

verified customer ✓

*I love eating out with my friends in New York City, especially Asian and Italian foods. Since I turned 30s, I get stomach upset every time after a big meal, especially if I had delicious stuff like **pasta, pizza, rice, desserts or ramen.** It got to a point where I felt like I couldn't enjoy eating out with friends anymore.*

*Then I discovered Emma. Now I just take 2 capsules of Emma after I eat, and I **never feel the painful bloating or indigestion anymore!** It works like magic!*

Kristin H.
verified customer ✓

Working out and eating healthy is my passion. But I still get gas and constipation weekly. I eat a lot of veggies and healthy salads so that could be the problem... I heard too much fiber can cause digestive issues...

*Recently, I tried Emma and all the symptoms went away, not to mention the **incredible anti-aging combo of Quercetin and Resveratrol** in this formula. Emma is keeping me young and free of digestive upsets. LOVE!!!*

Fully Empty The Bowels And Feel Ten Times Lighter

✓ FLUSH OUT PATHOGENIC BACTERIA COLONIES

Previously buried deep in the walls of intestines, and feel relief, have more energy and reclaim vibrant health. Once the pathogenic bacteria are cleared out, the first thing one might notice is **pooping speed increases.** This is because pathogenic bacteria slow digestion to suit their needs. Clear out the bad guys and get things moving again!

✓ CRUSH THOSE ANNOYING CRAVINGS

👉 **FACT:** Most cravings come from pathogenic signaling. That means — bad bacteria colonies who are trying to change the gut to suit THEIR needs. So a person might be craving snacks and sugar and all kinds of things that create a more acidic environment — which allows them to multiply while their hosts gets sicker, fatter and more backed up.

✓ FLATTEN THAT TUMMY

Our special combination of ingredients has been shown to reduce bad bacterial strains Desulfovibrionaceae, Acidaminococcaceae, Coriobacteriaceae, Bilophila, Lachnospiraceae and its genus Lachnoclostridium. **These pathogenic strains, which burrow themselves into the deep folds of the intestine are all associated with excessive weight gain and obesity. Emma fights these bad guys to achieve a lean and trim waistline.**

✓ OPTIMIZE POOPING SPEED

OF TIME TO GET IT DONE

Digestion speed, or pooping speed measures how much time it takes from eating to pooping. ***Methane gas, a toxic byproduct from several different strains of bacteria has been shown in studies to slow pooping speed.*** This creates constipation, bloating and stuck poop, and soon there's waste that just hangs around fermenting inside the gut. ***Emma targets these bacteria to eliminate methane gas, speed up digestion, restore peristalsis and start fully eliminating waste, daily.***

[Deep Clean Your Gut Now >](#)

Perfect Poops And Total Elimination

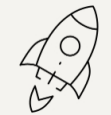

✓ DEEP CLEANING FOR THE GUT

Finally achieve that perfect 'shape of the colon' and experience complete relief and total elimination daily. Clean out the colon and feel much lighter and energetic throughout the day. ***No more 'backed up feeling' or accumulating stuck waste which ferments in the gut, spreading toxic waste throughout the bloodstream. Enjoy a fresh, clean feeling with a trim waistline.***

✓ ENJOY CLEARER SKIN

Many people don't realize that besides the colon, the pores of the skin are a major source of elimination. ***When the colon becomes backed up, the body will find alternate ways to push the toxins out.*** Unfortunately that means toxins and irritants and waste product will be pushed out through the skin, resulting in acne, rosacea, skin rashes, and hives. ***Fix the elimination problem, and often skin will clear up within just a few short weeks.***

✓ SKYROCKET THE METABOLISM

Studies have shown that it's difficult to increase digestion speed without also ***simultaneously increasing the metabolism.*** Which is why our Metabolic Repair Matrix was designed to crank up metabolism, so fat is being burned aggressively instead of sitting around stuck to the intestines feeling bloated, backed up and heavy.

✓ MORE DAYTIME ENERGY

Small intestine bacterial overgrowth consume nutrition from the food and turns it into toxic waste product. Emma is designed to fight these invaders, to help start extracting more nutrition, and extracting the maximum amount of energy from each morsel of food to power through the day feeling alert and motivated

[Experience Perfect Poops Daily >](#)

Eliminating Bloating, Constipation And Embarrassing Weight Gain

ACCELERATE DIGESTION SPEED — Instead of slow sluggish bowels that barely move food through the system, Emma is going to rev up that engine and get things moving again, ***detoxifying the tissues and restoring the gut at the same time, achieving full elimination daily.***

ONCE AGAIN ENJOY FAVORITE FOODS - Gas and bloating, and indigestion comes from having bacteria and yeasts fermenting foods inside the digestive tract. No more weird restrictive diets, Emma will help superpower digestion to enjoy favorite foods.

HELP HEAL LEAKY GUT - Leaky gut means parasites or pathogenic bacteria has eaten tiny holes in the delicate lining of the small intestine. This allows toxins, parasites and undigested waste to leak out into the bloodstream, causing fatigue, painful joints and headaches. Several of our ingredients have shown in studies to kill the bad guys and repair the lining, keeping the contents of the intestines where they should be!

ENJOY TRAVELING WITHOUT FEAR - Protect the family from pathogenic bacteria and parasites when traveling to beautiful tropical destinations outside of the developed world. Emma provides 24/7 protection from harmful bacteria and pathogenic parasites who are trying to make themselves at home inside the gut.

"PLUS: Here's How To Get Free Shipping On Today's Order..."

Dr. Gina here,

Since we've cracked the code to perfect pooping, folks everywhere have been ordering more Emma every day. You're going to love what it does for your digestion.

Our customers have been loving what they see in the mirror and how people have been reacting to them, especially when their friends say "You look amazing, what have you been doing??"

People gain confidence from the new way they look and feel, and they've been spending more time with their friends and families, being much more active. Emma has been absolutely flying off the shelves.

However, because of all this, there's a problem. Our manufacturing has been absolutely overwhelmed. Creating a batch of Emma went from 8 weeks, all the way up to 16 weeks.

We are doing our absolute best to keep up with orders, and trying to not let anyone down. We are working overtime to help people get a product that helps people in so many ways.

That's why we encourage you to claim a six pack supply of Emma. The manufacturing difficulties could get worse any day now, and it could end up being a **five or six month delay just to produce a single batch.**

So of course most customers pick the three or six-pack of Emma, because you save the most money buying in bulk. **Also it's important to know you'll be getting free shipping when you select one of these options as well.**

I want to make sure you have what you need. I would hate to see you healing your digestion for a few months then run out, and have to start all over again just because you have to wait another 12 weeks to restock.

So if you can, and if it makes sense for you, please consider getting your hands on the 6 pack. You've always got our money back guarantee, so there's really no risk at all.

Either way, whatever package you choose today, I'm here to support you and our entire team. Thank you from the bottom of our heart. God bless and as always we're wishing you a happy and healthy life for years to come.

I've had digestive problems since I was a teenager. As I got older, these issues got a lot worse. Foods that used to cause a little bit of gas and bloating now become **full blown run-to-the-bathroom emergencies**.

All the doctors would tell me is just eat a really bland boring diet and you'll be ok. Well I think foods are one of the great pleasures of life, and eating a bland diet for months at a time is torture -- especially when it brings no real relief.

I found your website online and of course I was skeptical (having tried everything without results) but I was like what the heck, if this works even 10% as well as people say, it's worth a shot. I got my first bottle and it was like -- ok I think this is working. It was gradual at first. **By the second week, I was having very little bloating, and no emergency trips to the bathroom. Five weeks later and I can eat anything I want, and feeling great.** I feel like a dark cloud lifted, and I've just bought a six pack of Emma so I'll never be without it."

Kimberly H.
verified customer ✓

"Starting with my third pregnancy, **I began gaining weight uncontrollably**. My cravings for junk just skyrocketed out of control for what I thought was no reason. I tried exercising, but it's really hard when you're also struggling with **fatigue and depression**, and not wanting to leave the house or be seen in public.

I was really scared that I was losing my body permanently, and our romantic life was suffering because of it.

A friend I really trusted turned me onto Emma, and I haven't looked back since. **First - the uncontrollable cravings are GONE.** I have more energy and clarity. I'm more in control. I've lost 15 pounds already in just 2 months. I make better choices, **I can think and no longer have these nasty 'gut bugs' making decisions for me.**
Thanks Emma!"

Frequently Asked Questions

Q1 Hey Dr. Sam, I've tried everything from laxatives, to cleanses to probiotics. And probiotics are quite popular these days so what makes Emma superior to probiotics?

Answer *Probiotics have exploded in popularity over the last decade. So why has our gut health continued to get worse over the same time period? [\(Read more\)](#)*

Q2 I've always kinda suspected that my weight gain as I've gotten older is related to my digestion problems, and your presentation confirms this. So my questions is will Emma help me lose weight?

Answer *The main function of Emma is to help you enjoy "perfect poops" on a daily basis by naturally restoring balance to your gut environment while healing and repairing your gut lining. [\(Read more\)](#)*

Q3 Are there any side effects? is it safe to take long term?

Answer All of the ingredients in Emma are generally recognized as safe. It's free from any dangerous drugs, there's no stimulants, there's no weird cleansing or laxatives, nothing that is going to cause dependence or addiction. ([Read more](#))

Q4 I don't have constipation very often, but I do struggle with food allergies.

Answer Food allergies are a sign that undigested waste product is leaking into the bloodstream, getting pushed out into the tissues, where it's being seen as a foreign invader. ([Read more](#))

Q5 Will Emma help with bloating and constipation?

Answer Apart from relieving constipation, Emma is very effective at treating bloating and constipation. ([Read more](#))

Q6 Will Emma help with diarrhea?

Answer Diarrhea and constipation are 2 sides of the same coin. If you have diarrhea you also have constipation. I know it might sound counterintuitive, so I'll break it down for you. ([Read more](#))

Q7 How fast will I see results?

Answer Everybody is different and it really depends on how long archaea have lived inside your body and the amount of damage they've caused to your digestive system in that time. ([Read more](#))

Q8 Is Emma available anywhere else for a lower price?

Answer We only sell Emma direct through this website and there's two very important reasons why we do that. ([Read more](#))

"I've had IBS for years now. I've been through so many Amazon products in the search for a natural treatment that's gentle and works. Unfortunately, most laxative options are brutal and I could only use them for a short period of time. I was looking on the web and came across Emma and decided to give it a try. It took one day to feel the change in my body, and after 2-3 days my digestive issues were gone. I definitely encourage anyone suffering with IBS, chronic constipation, digestive irregularities, and so on to try taking Emma."

"After trying thousands of supplements, etc. for IBS-D, I've finally found something that works! I was prescribed expensive pills and went through blood tests to try and find a solution for IBS-D. I have spent countless hours researching natural solutions and have spent so much money on solutions to make my stomach feel "normal" again. This is the only product that has worked and made me feel 100%. There is no cramping, no bloating, and no bad side effects."
